

The Armored Seat with Q.E.S. (Quick Extraction System)

The Armored Seat™ is a portable Threat Level IIIA seat cover for use in a vehicle or aircraft. As an owner of The Armored Seat™ I have found it to be an excellent tool that is easy to deploy and use. The Seat affords me protection and security in soft skin vehicles; no longer do I have to sit on my vest.

First off, let's talk portability. I carry my Armored Seat™ from my office to my work vehicle and on occasion when I am air born. It weighs about 33lbs and is easy to carry, taking up little space when stored. In fact I am able to fit it in an overhead compartment of a commercial airplane.

The Seat is adjustable and can cover a range of heights, at 6'4" this was a factor in my purchase. The back of my head is covered and with the added Floor Extension so are my feet. I use the side and leg protection together or separate depending on my situation. I did purchase an extra set of leg panels to add even more adjustable protection down the sides.

The built-in Quick Extraction System (Q.E.S) is an added and surprising benefit. The Q.E.S resembles a KED® (Kendrick Extrication Device). By reversing the attachment straps and securing an injured person it then enables a rescuer to remove them quickly to safety. Although intended for use under fire, I used it at a campsite during a family outing. When not in use, I store my Armored Seat™ in my trunk and at the camping trip one of the adult's in our party fell and broke her ankle. I was able to secure her in the Armored Seat™ using the Q.E.S. and drag her safely to arriving emergency crews.

The Armored Seat™ is money well spent. I see its use in so many applications: Executive/VIP Protection, Private Contractors (like myself), Law Enforcement, SWAT (sniper pad), Military, Federal Air Marshall, and EMS the list is endless. I highly recommend The Armored Seat™.
